

Range Extender for Wireless People Counters

- Extends Range of Wireless People Counters (Network)
- Easy Installation
- LED Signal Strength Indicator
- European Designed and Built

The Range Extender increases the Wireless Range between a Wireless People Counter (Network) and the SNG Hub (Sensor Network Gateway).

With the Wireless People Counter (Network) solution the SNG Hub captures the counting data from one or multiple counters and uploads it to a local or remote server every minute. This requires the SNG Hub to be located anywhere within a range of up to 25 metres (unobstructed) from the Wireless People Counter. Implementing the Range Extender effectively increases the range between the Sensor Network Gateway device and a single Wireless People Counter by up to a further 25 metre range.

The Range Extender has been designed for ease of installation: when a SNG Hub is found the LEDs display the signal strength of the detected device. We recommend the Range Extender is installed in a high position to improve the wireless signal via line of sight.

Specifications

- Dimensions: 185 x 53 x 16 mm (approx)
- Material: ABS Plastic - Black
- Power supply: 5V
- Status: LED

Included with the Package

- Range Extender (Model RE10)
- Power Adaptor
- Magnet for resetting device
- Quick installation guide
