

Discovery Layer for Amlib

See Your Amlib Catalogue Come Alive

The VuFind Discovery Layer replaces all the traditional functionality of the Amlib OPAC catalogue and integrates it seamlessly with the kind of discovery and interactive experiences that library patrons experience daily elsewhere on the web.

The impressive functionality of VuFind will make your library become the centre of how patrons find, manage, discuss, and engage with media content of all kinds in an increasingly electronic age. It features mashups, similar title suggestions, integrated search intelligence, faceted results, "More Like This" Resource Suggestions to name a few .

Your Users Need More than a Catalogue

Contemporary libraries need state-of-the-art software to make their collections and services visible and attractive to web users accustomed to the one-stop-shopping aspects of Google and the customer-oriented features of commercial sites such as Amazon.

VuFind, an open-source resource discovery portal developed for libraries by libraries, has harnessed the power of the contemporary web search technology that enables users to query and browser the library's resources in a simple yet sophisticated manner.

A key feature of the discovery portal is the mobile phone application interface for devices such as the iPhone and Android Smartphones.

Impressive List of Features

- Mashups
- Faceted Results
