Dashboards for Amlib

Our Dashboards lets you visualise, track and measure real time Amlib data. Not only do these dashboards look great, they provide a familiar way for staff to access and interpret library data. Importantly the dashboards are optimised to run on any device and can be embedded with other intranet web pages.

Using the EvolvePlus Report and Dashboard builder you can easily create stylish web based dashboards with reports, charts and statistics. There's no need to schedule Amlib reports or install Amlib to view the dashboards - we provide real-time information directly to your web browser running on your PC, Mac or tablet (e.g. iPad).

We can also combine data from different sources, such as Amlib, Sensify, VuFind and EvolvePlus People Counters and present as a single integrated Dashboard.

Dashboards with Drag & Drop
Custom built web-based dashboards uniquely tailored for your library can be quickly modified using the straightforward drag & drop interface.

Powerful Report Builder
The EvolvePlus Report and Dashboard builder supports extensive report & chart types, including tabular, summary, pivot, line, chart, pie, bar, column, area and total counts.

Mobile Device Ready
Powered by Bootstrap responsive framework, EvolvePlus Report and Dashboard builder works on all HTML5 compatible browsers on PCs, Macs or mobile devices like the iPad.

Embed Dashboards & Reports
You can embed all the report widgets, dashboards on your library intranet, blog or other portals.
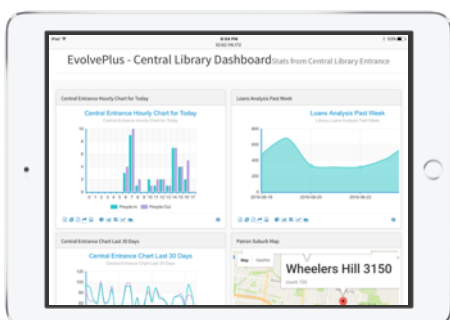

Multiple Data Sources
The Dashboards can connect to data within MySQL, PostgreSQL, SQL Server, SQLite and CSV, and easily combine them into a single reporting view.

Amlib Dashboard Examples
Dashboard widget examples:

- Patron postcode analysis using Google Maps
- Daily loan statistics chart
- Reservation queue performance
- Overdue fee analysis graph
- Popular title loan analysis
- Popular OPAC search terms
  …..and much more.
