Dashboards and Reporting for BookingsPlus

Our Report and Dashboard builder lets you visualise, track and measure real time BookingsPlus and Brushtail data. Not only do these dashboards & reports look great, they provide a familiar way for staff to access and interpret library data. Importantly the dashboards are optimised to run on any device and can be embedded with other intranet web pages.

Use DashboardPlus to easily create stylish web based dashboards with reports, charts and statistics with real-time booking information directly to your web browser running on your PC, Mac or tablet (e.g. iPad).
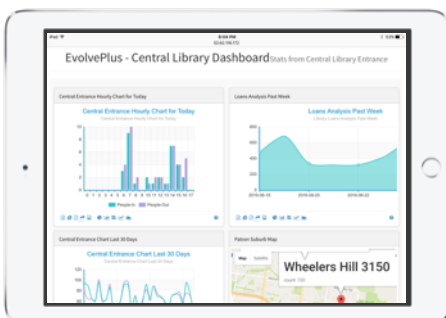

We can also combine data from different sources, such as Sensify, VuFind and EvolvePlus People Counters and present as a single integrated Dashboard, together with the ability to export reports to Excel, HTML and PDF.

Dashboards with Drag & Drop
Custom built web-based dashboards uniquely tailored for you can be quickly modified using the straightforward drag & drop interface.

Powerful Report Builder
The Report and Dashboard builder supports extensive report & chart types, including tabular, summary, pivot, line, chart, pie, bar, column, area and total counts.

Mobile Device Ready
Powered by Bootstrap responsive framework, DashboardPlus works on all HTML5 compatible browsers on PCs, Macs or mobile devices like the iPad.

Embed Dashboards & Reports
You can embed all the report widgets, dashboards on your intranet, blog or other organsiation portals.

Multiple Data Sources
The Dashboards can connect to data within MySQL, PostgreSQL, SQL Server*, SQLite and CSV, and easily combine them into a single reporting view.

BookingsPlus Dashboard Examples
Dashboard widget examples:

- Room/resource utilisation chart
- PC Booking analysis
- Event attendee details
- RefClicker statistics
- Unpaid bookings list
- Popular booking timeslot graphs
