# evolveplus

BookingsPlus and Aurora LMS Integration

BookingsPlus is an integrated suite of web applications that streamlines the bookings of public PCs, event registrations, room bookings, game consoles and more. Staff and users can view availability and make booking reservations effortlessly with a minimum of fuss using their web browser.

BookingsPlus features seamless integration with Aurora LMS using the Aurora Web Services providing flexible and secure two-way connectivity.

The benefit of the web services integration is that it not only allows BookingsPlus to authenticate a library patron membership record for pc and event bookings but opens up an opportunity for future planned enhancements including the transfer of print charges directly to the user's library account as well as allowing public pc users to update their library preferences.

How It Works

User creates PC booking using BookingsPlus web application

BookingsPlus

BookingsPlus authenticates user with Aurora Web Services

Aurora

Simple Implementation Process

It is a straight forward process that just requires an account in Aurora that can be used for BookingsPlus.

PC Bookings Key Features:

- Cloud Solution - securely hosted by EvolvePlus
- Centralised PC booking system across all branches
- No Upfront Software License Costs
- Patrons can self-book a PC via web browser
- Patrons can walk up to an available PC and use immediately without making a booking
- Schedule a group of PCs for a Training Class
- Schedule reoccurring bookings
- Flexible or fixed bookings times
- Timed based session control with automatic log off
- Create express internet access PCs

- Integrated PC Client software compatible with Windows 7, 8 and 10
- Create visitor logins.
- Customised end session warnings (x2).
- Create 'Out of Order' messages for broken PCs
- Daily usage reports for management analysis.
- Patrons can lock current session
- Seamless user authentication with Aurora LMS
- Can be integrated with pay/print systems.
- "Staff Release" Print Management under development (can also use other solutions such as PaperCut)
